All ratings presented represent relative differences between B-H Genetics® hybrid products.

This information is not intended for use in comparison with hybrid products from other companies.

Adverse environmental conditions, cultural practices, disease and insect pressure, can affect the relative accuracy of the ratings and listed maturity of the hybrid products.

Rating Scale: 1 = Excellent, 9 = Poor

Sugarcane Aphid Rating (SCA) : T= tolerant S= susceptible

Forage & Sudan Product Lineup

Product	Type	Maturity Group	Photoperiod Sensitive	Male Sterile	Midrib Color	Midrib Type	Anthracnose Rating	Recommended Primary Usage			Recommended Planting Rate (Lbs/acre)	
								Silage	Hay	Grazing	Dryland	Irrigated
BH 370F	Forage Sorghum	M	No	No	Yellow	Juicy	N/A	x			5-9	8-12
OPAL	Forage Sorghum	L	No	No	Cloudy	Normal	2	x			4-8	6-10
BH 147S	Sorghum-Sudangrass	M	No	Yes	White	Normal	N/A		x	x	10-30	35-80
BH 257SBD	Sorghum-Sudangrass	M	No	No	Brown	BMR-6	N/A		x	x	10-20	14-40

Anthracnose rating: 1=very tolerant, 5=susceptible

* recommended only after primary cutting

** Must be planted into minimum of 12.5 hour days

CAUTION

Sorghum-sudangrass and sorghum products can develop prussic acid or elevated nitrate levels under certain conditions.

Avoid single, heavy nitrogen applications, especially prior to or during drought periods.

Do not graze very young plants, plants recovering from drought, or plants damaged by a frost or freeze.

CAUTION

Hybrid pearl millet should not be harvested or grazed lower than 6-8 inches above ground level.

Cutting or grazing to heights below this threshold will result in great-ly reduced regrowth of the crop.
